

AUTOMATED METER READING WICO22

With WICO22, the software for automatic meter reading (AMR) of metering data, RMG offers a fully-fledged and mature solution for the secure procurement and distribution of billing-relevant measurement data from various measuring devices.

The dynamic changes in the energy-market means the continuous rearrangement of operational workflow for energy providers.

Management of energy-stations-data is a key role.

Fully developed, market approved and up-to-date

RMG's data reading center WICO22, offers a fully developed, market approved, and up-to-date software solution to provide, evaluate, and distribute data of measuring devices, electronic volume correctors and DSfG-capable devices, e.g. process gas chromatographs and correlative gas condition measuring instruments can be processed. WICO22 supports RMG devices as well as devices of many other third party suppliers.

Modular und flexible

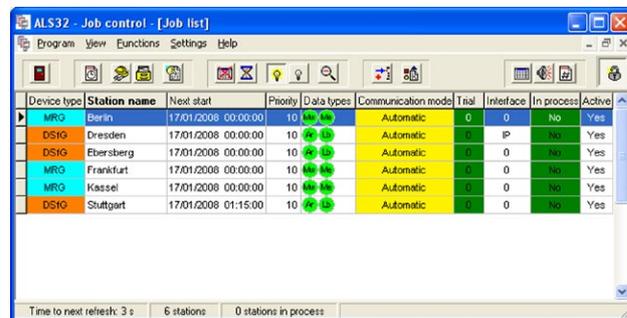

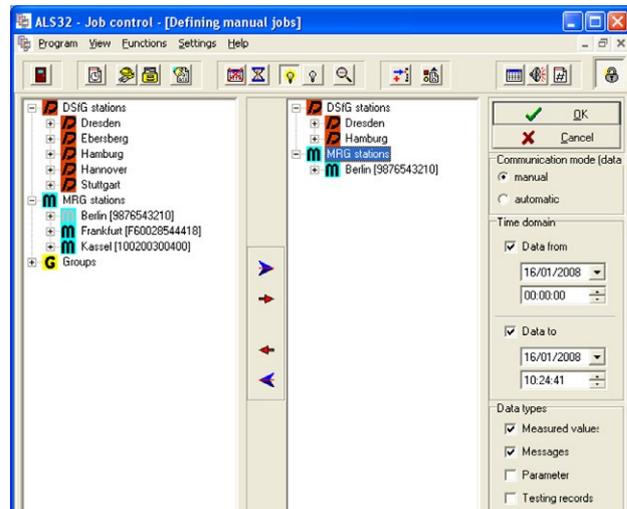

WICO22 transfers measured energy-data to a central data processing system and archives them in a data-base. The readout data is easily available for further processing.

WICO22 is modular upgradeable to cover all application fields of power economy and energy industry in the best possible way. The tasks are the preparation of usage-bound charging, support of technical revision as well as metrological application for monitoring and fault-clearance.

Service and Support

During the installation and implementing phase, our experienced software-engineers will be ready to support you. Thus, WICO22 will be integrated smoothly in your IT infrastructure and data-recall can start without any problems.

If any questions should appear during processing, RMG offers software support by telephone and locally. Troubles will effectively be analyzed and will be cleared rapidly.

WICO22 - Features

- Time controlled and manual remote data read out of gas-, energy-, and measured data of water from supported dataloggers
- Multifunctional possibilities of analysis of energy-data
- Simple automatable data-export into accounting routines spreadsheets and text files
- Readout DSfG-devices of any vendor
- Reading of meters and volume transformer with proprietary communication interfaces from RMG and third party suppliers
- Call-acceptance for messages from station
- Visualization of read data
- Display of instantaneous value and remote parameterisation of stations
- Integrated database system
- Available as a single-user and network version
